The **LUMENATOR®** by Maxxeon is a series of self-contained, compact, rechargeable area work lights that are ideal for illuminating night job sites, in-plant maintenance and emergency power outage situations. They run cool and turn on instantly. These lights are compact and light in weight and offer unmatched portability and performance.

Unlike traditional light sources, the LEDs in the **LUMENATOR®** promise reliability and durability with expected life expectancy of 50,000 hours. The extra wide, flood-style beam is a brilliant daylight white, which easily illuminates the darkest work areas. The nylon handle is moveable through a 180 degree arc to allow precise positioning of the light beam. The lights are rain proof and conform to IEC IP65 and IK07 standards. Includes 3 LED battery indicator and 120 volt charger.

Optional high grip magnets and tripods that support up to 3 lights enhance the versatility of these products. All **LUMENATOR®** lights can be ordered with or without magnets.

Optional Telescopic Tripods
Extend from 2 ft. 6 in. to 5 ft. 8 in.

Cyclops™ Rechargeable Area Light

NEW!

The WorkStar® 800 **CYCLOPS** Area Work Light is a compact, lightweight floodlight designed for daily use in demanding shop environments. Featuring a custom designed lens, the brilliant white flood-style light beam produces a round, even pattern that is free from hot spots and dark spots. This high performance light produces 420 lumens for 2 hr on high and 160 lm for 5 hr on low. The powerful magnetic base, built into the handle, secures the light to metal surfaces and allows the light to be angled through a 180 degree range to illuminate the work area. Includes a red/green charge indicator and a micro USB charging cord. Order No. MXN00800
